EXAMINER'S AMENDMENT AND STATEMENT OF REASONS FOR ALLOWANCE

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Christopher R. Lipp on 6/9/2004.

The application has been amended as follows:

To the end of claim 10, add "further comprising: transmitting power control command information from the mobile station to the base station; and transmitting payload information from the base station to the mobile station with a transmit power that is a function of the power control information received from the mobile station."

Allowable Subject Matter

1. Claims 1-18 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The applicant's inventions of claims 1, 11-13 include the subject matter of generating at a mobile station an adjustment command for adjusting transmit times at the radio interface between a network and at least one mobile station; and performing

Art Unit: 2682

adjustments of the transmit times at the mobile station based on said adjustment command, wherein the adjustment command is generated based on adjustment control information received from the network so that adjustments performed by the mobile station are controlled by said network. The examiner found persuasive the applicant's arguments, filed on 3/24/2004, in which the applicant distinguishes the inventions of claims 1, 11-13 from the prior art cited in the office action mailed 12/22/2003. Other close prior art includes HUI et al (US 6,470,057 B1) and DUPUY (US 5,711,003 A). Both of those references disclose generating at a mobile station an adjustment command for adjusting transmit times at the radio interface between a network and at least one mobile station; and performing adjustments of the transmit times at the mobile station based on said adjustment command. However, neither reference discloses that the adjustment command is generated based on adjustment control information received from the network so that adjustments performed by the mobile station are controlled by said network. Lastly, no new prior art has been discovered that would anticipate or render obvious the inventions of claims 1, 11-13. Therefore the applicant's inventions of claims 1, 11-13, when considered as a whole, comprise a unique combination of subject matter that is neither taught nor suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

HUI et al (US 6,470,057 B1)

DUPUY (US 5,711,003 A)

ABE et al (US 2003/0026239 A1)
